

Safe Storage and Disposal of Used Sharps

1. **Use a plastic container with thick plastic and a lid.**

Free options include empty laundry detergent jugs or thick-walled juice containers. Milk jugs or cartons aren't thick or strong enough to keep needle tips from poking through.

2. **Never overfill whatever container you are using.**

Overfilling a container increases the risk of being poked with a used sharp. It's better to start a new container.

3. **Drop full container(s) into the needle drop box in your community.**

In the same way you want to avoid overfilling your container, avoid overfilling the needle drop box so workers aren't put in danger either.

Together, we
can dispose of
sharps safely!
